

Baghera View

The New Version of the STEP Based Models Viewer and Synthesiser Based on Virtual Reality and Open Source Technologies

Thermal & Fluids Analysis Workshop (TFAWS) 2006

The University of Maryland College Park & NASA's Goddard Space Flight Center, Maryland, USA

9 August 2006

Eric Lebègue & Elisa Ciuti (CSTB)

Baghera View

the Need of a Reference Viewer

- Success of .doc or .rtf format is because (almost) everybody has Microsoft Word on its desktop
 - Even if it is only for displaying and printing a document from a partner
- In AEC sector, success of DXF/DWG format is because (almost) every architect, civil engineer or constructor has AutoCAD on its desktop
 - Even if it is only for displaying and printing 2D drawings
- ➡ An equivalent Reference Viewer is required if we want to have success for STEP !

Ambition of Baghera View

- To become the Reference STEP Viewer for the Space Industry
- To be used by sender and receiver of the data, for :
 - Checking 3D geometry
 - Checking assemblies and properties
 - Reporting the exchanged data

Current and new functions

- **Loading / superposing several STEP models into one 3D session**
 - STEP-TAS, AP203/214
 - Integration of TASverter (ESARAD, THERMICA)
- **Integrated AP203 to STEP-TAS converter**
- **Browsing hierarchy, searching for elements**
- **3 rendering modes : wire frame, solid, transparency**
- **Elements properties display**
 - With table of colours
- **Generating reports**

BAGHERA View Report
STEP-TAS File

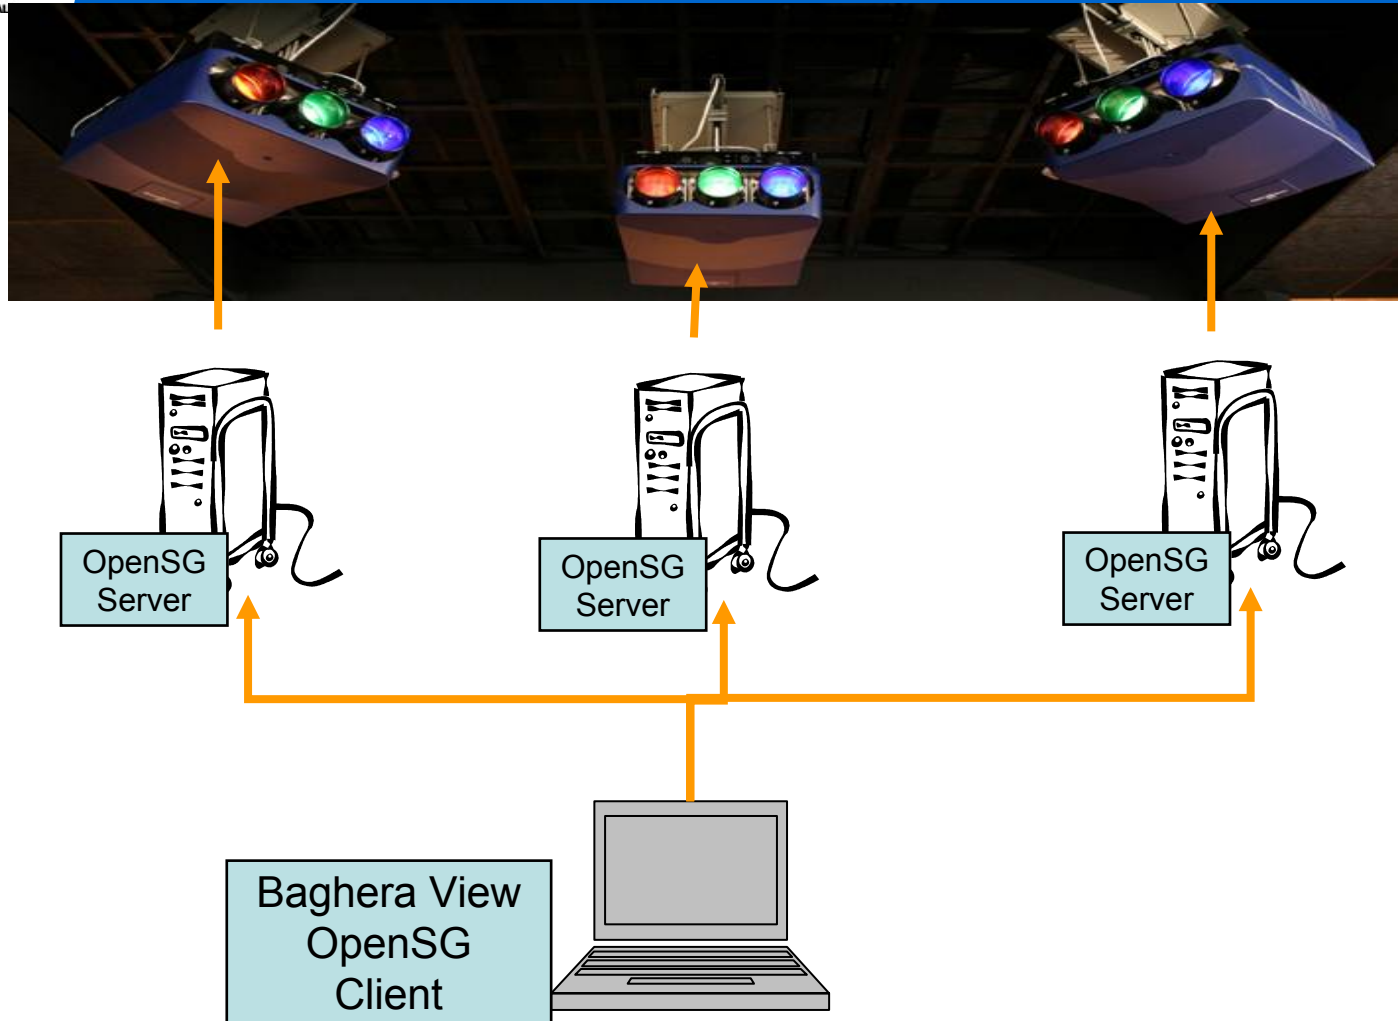

file name : metopCOLD.d.stp
 Time stamp : 2004-02-10T17:44:03+0100
 Author : DUMNY ALTHOR
 Organization : ESX
 Preprocessor version : TASviewer (2004-02-11)
 Crisprating system : ESX/RAO.org
 Authentication : UNWIKOWIT

Summary : A new architecture

- Kernel = CSTB EVE portable platform (Windows, Linux, UNIX)
- STEP-TAS V5 loading with PyEXPRESS/C++ library
 - To be replaced by expressik
- OpenSG for 3D graphical display using independent OpenGL layers
 - Allows clustering (see Immersion Room)
- AP203/214 loading with OpenCascade 5
- Report generation in Word/RTF format + XML
- Portable GUI with QT

Baghera View in Immersion Room

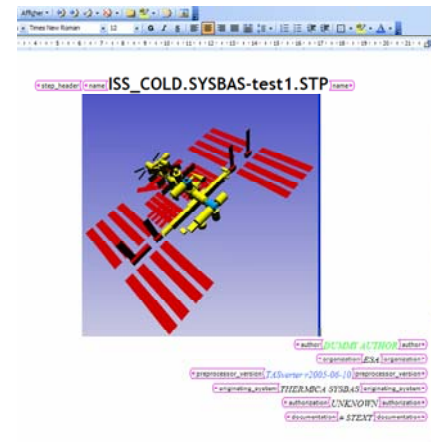

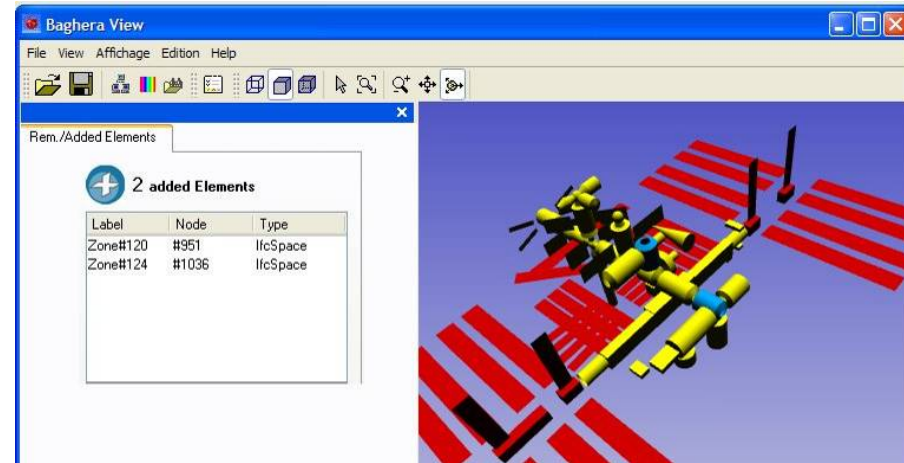

Using Semantic Comparison and Reporting of TAS models

Application with Baghera View

Current Work with *Baghera View*

- Comparison of TAS product models
 - Using Expressik parser

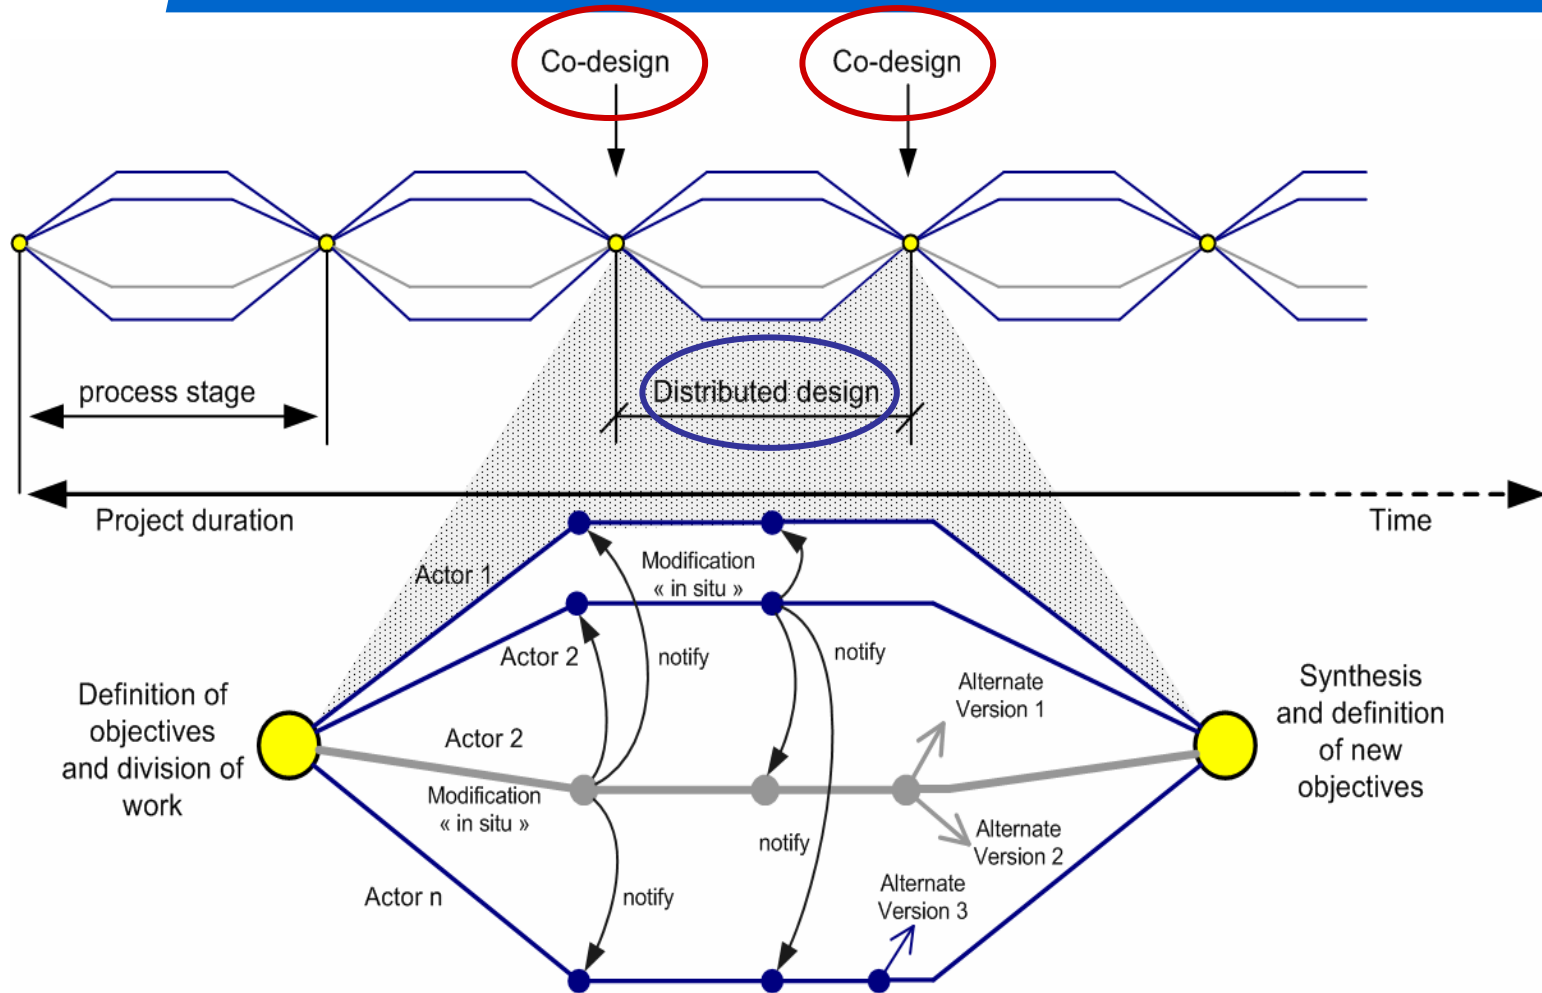

- Tas-Arm report generation
 - Automatic Update with *Word 2003*

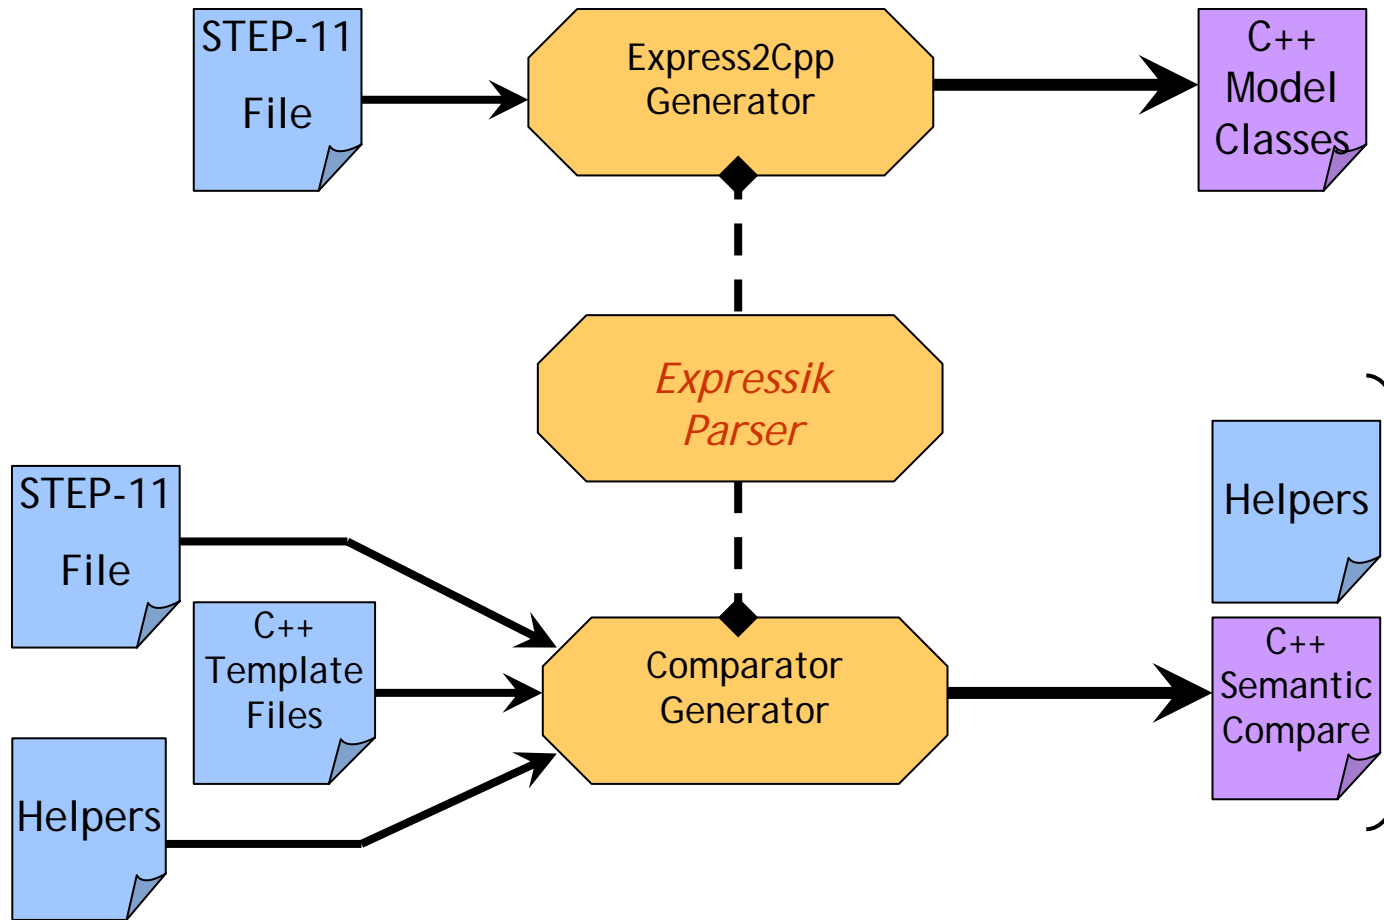

Aim of Semantic Comparison

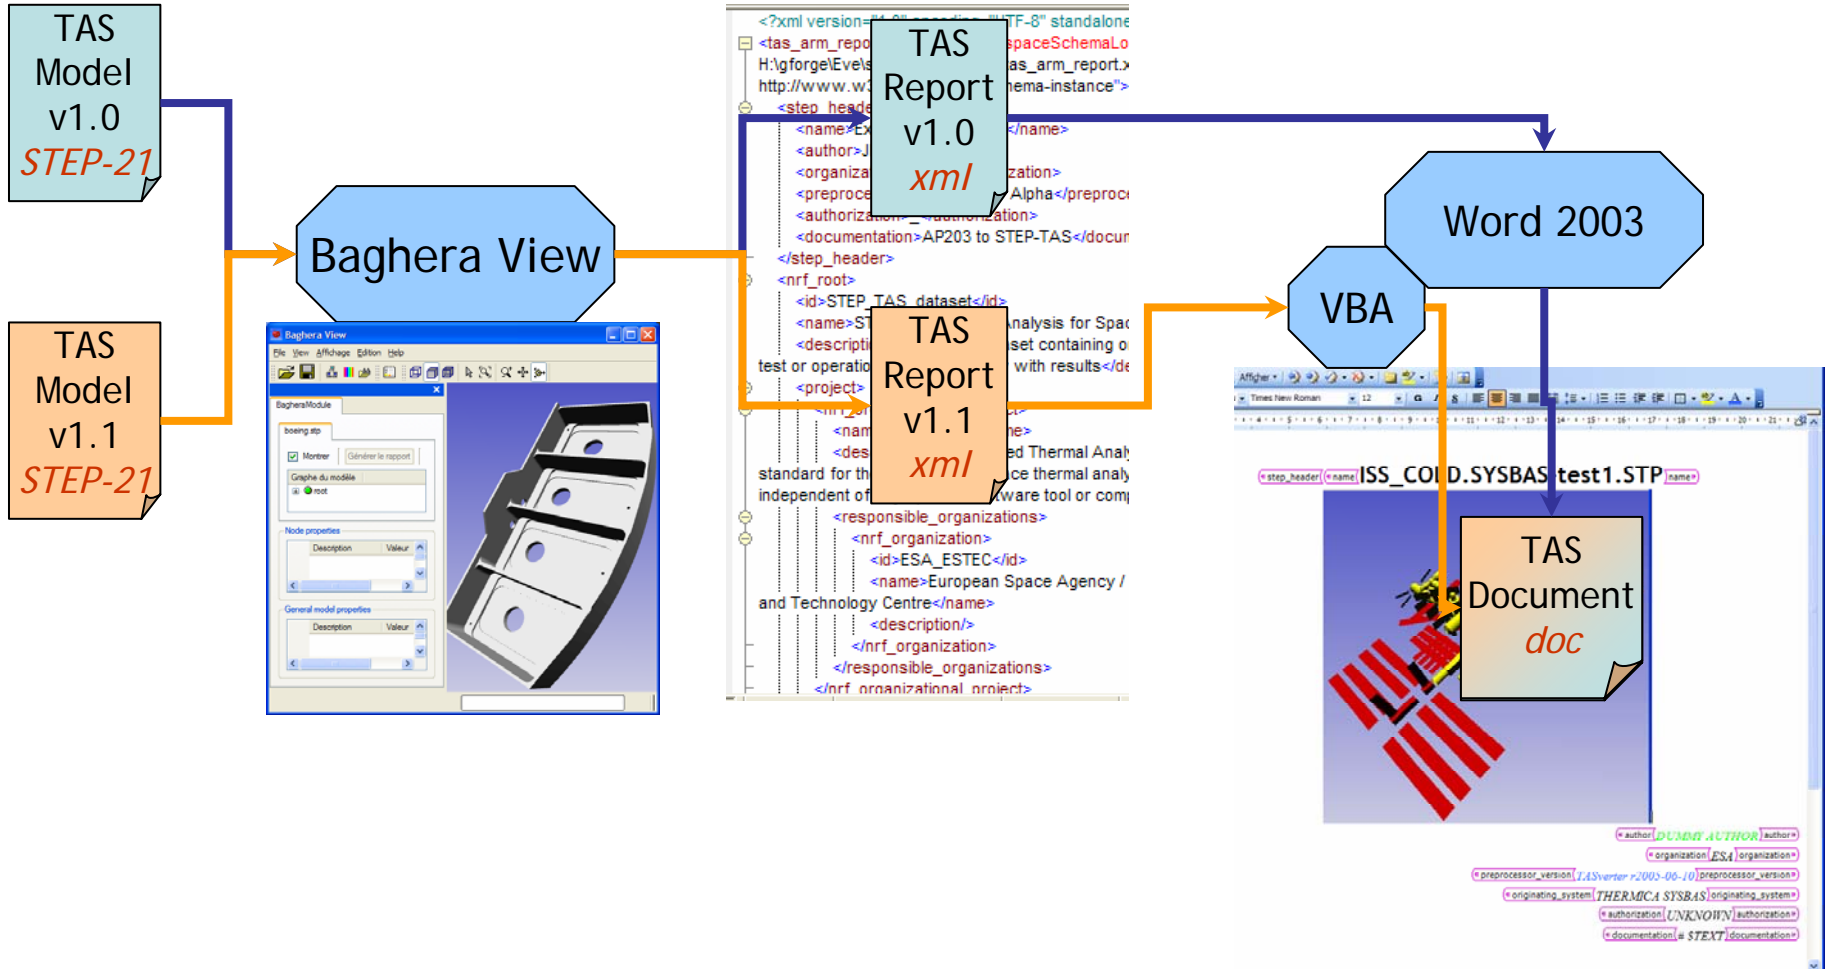

Why do we need semantic comparison ? Design Process (Hanser, 2003)

Semantic comparison of product models Implementation

Report of TAS models

Baghera View « children » in the construction sector

■ IFC Viewer

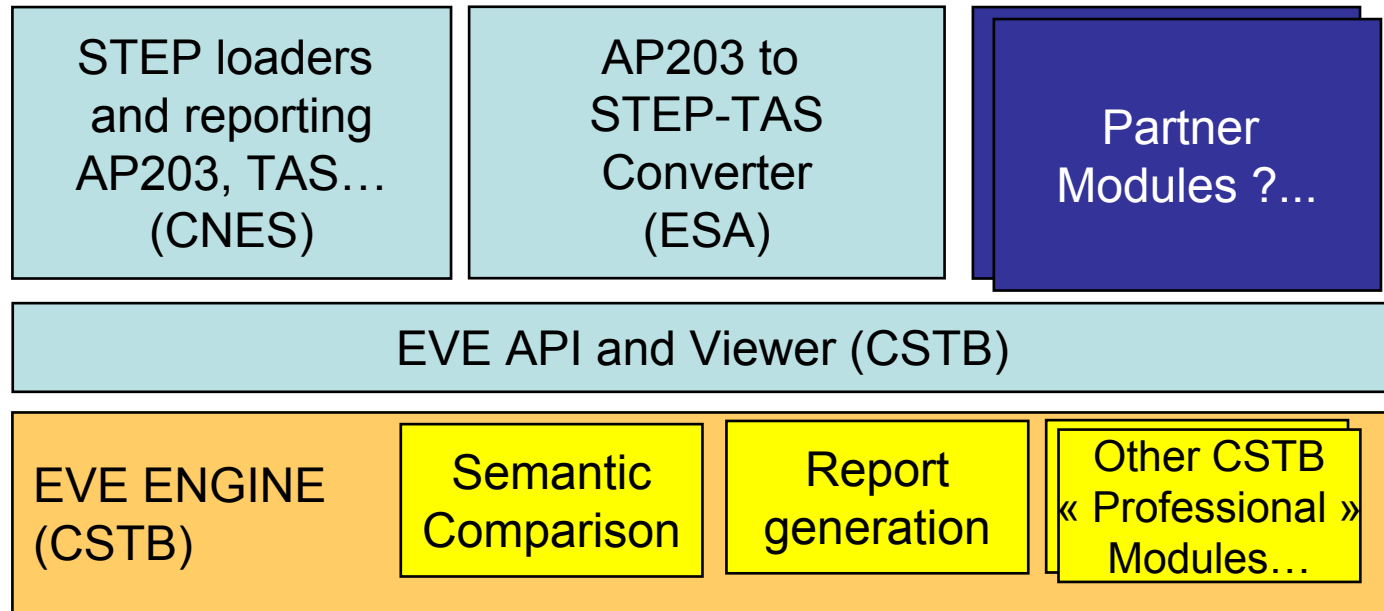

- Checking IFC for exchange in public markets
- Post-processing and reporting functions for in-house simulation tools (structural analysis, thermal...)
- Feeding new digital cities
- Partners : BOUYGUES, VINCI, EIFFAGE, SETRA, French Ministries (Housing, Equipment)...

■ HOMES Project with Schneider

- One of the 5 major French research project of National Innovation Agency (announced by J. Chirac)
- Energy saving
- Integration of electrical definition into buildings (wiring, devices...)
- Optimization of building energy saving (integration with thermal analysis)

- Baghera View is developed under CNES contract
- CNES agrees for free distribution of Baghera View in Europe
- Distribution outside Europe needs to be discussed/formalized

Modular Architecture of Baghera View

Completely based on Open Source Solutions

Proposed extensions

- **Detailed STEP files analysis (rules checking...)**
 - Required for files not generated by TAS Verter

- **Enhanced GUI**
 - web meeting/remote display capabilities

- **Upgrade to be compliant with future TAS Verters**
 - Orbitography, kinematic, missions related data...

- **New scope :**
 - STEP-NRF (results of analysis, ESATAN...)
 - STEP-SPE (ESABASE...)
 - AP209, AP210/212, AP233 (sponsors are welcome)

- **Other ideas ?**

Thank you for your attention
